

Crane davit arm changeout with spider crane

ASSET Fixed platform UK
DATE 2015

Utilisation of the right equipment and specialist project management for a changeout minimises crane downtime

BENEFITS

Specialist advice to minimise crane downtime

Rental of equipment for a cost effective solution

Experienced and competent teams to ensure quick delivery

CHALLENGE

Our client wished to changeout a Gross Overload Protection (GOP) system as part of their five yearly Planned Maintenance Routine (PMR). The crane's design requires that the davit arm is used for the changeout process but on inspection it was condemned due to corrosion.

We were then contracted to plan and conduct a changeout of the davit arm so that the GOP could then be replaced. A URW-1006 spider crane was selected as the most suitable option for completion of the job as the client had stipulated that any crane downtime should not exceed four continual days.

SOLUTION

We assessed three options for the project and recommended using a spider crane, which was approved by the customer. The two unviable options were:

- Scaffold access: construction time was too long which would have resulted in the crane being out of service for at least 14 consecutive days
- Using the North crane for doing lifts: with the North crane falling about 2 m short from the position of the davit arm some scaffolding would still be required and the resulting downtime would be too long.

The end solution utilised a combination of a spider crane and a rope access team which did not require any scaffolding. All lifts for the davit arm changeout were performed using the spider crane.

Unfavourable weather conditions gave us only three suitable days to conduct the changeout within a two week window, so the affected crane was only out of service for three days. Even though bad weather conditions meant the spider crane was hired for longer, the minimal downtime of crane operations did result in the most cost effective option.

SUMMARY

- Project management
- Rope access services
- Engineering
- Rental of URW-1006 spider crane – 4-off outrigger stands and 32-off timber frame with dimensions 2400 mm x 1250 mm x 120 mm (L x W x H)
- Rental of supporting equipment

1.

CB1 (attached to spider crane hook) 1 x 1 Te 10 m chain block 1 x 8.8 Te masterlink 1 x 3.25 Te safety bow shackle 39.5m Crane motor housing

.

3.

- .
- Work scope set-up
- .
- Replacement of South crane davit
- 3.
- Fully extended spider crane boom
