

SPARROWS

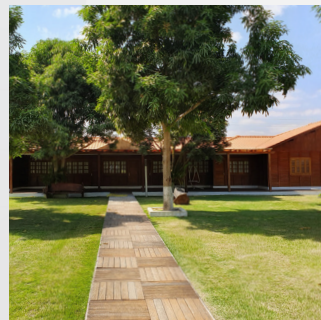

OFFSHORE CRANE OPERATOR TRAINING IN ANGOLA

Industry best practice training that ensures
competence and reduces risk

Local training for local people

Courses are available at our purpose built facility in Kikuxi in Angola but we also have the ability to send our trainers to client locations (both onshore and offshore).

Our Angola facility offers a unique training experience through the use of both a full-size mobile land crane and a portable state of the art crane simulator.

THE SPARROWS STANDARD

Our crane operator standard is recognised as the industry's international 'de facto' standard. This dominant position is a product of 45 years' experience as the industry leaders in offshore lifting operations.

When people are trained and certified by us you can be assured of their competence to carry out their role to the Altrad Sparrows exacting and industry leading standard.

All our trainers are staff members who have been selected for their technical expertise and industry experience.

WHY COMPETENCE IS IMPORTANT

Crane and lifting operations are one of the most safety critical functions offshore. As a key artery to the platform, safe and reliable lifting performance is critical to ongoing operations.

We define competency as the ability to consistently, independently and safely perform a task that can be measured against a standard. Our goal is to improve workforce capability and safety of operations.

The Altrad Sparrows above all one standard philosophy means we are committed to ensuring the same high standard of quality and safety across all our global locations.

OVERVIEW OF OFFSHORE CRANE OPERATOR STAGE 1

Altrad Sparrows courses run with a maximum of 6 delegates to ensure sufficient time is dedicated to each individual for one to one hands-on tuition. The course is delivered in two parts:

Theoretical training covering:

- Health and safety legislation
- Basic crane terminology
- Principles of stability
- Basic mechanical principles
- Safety devices
- Safety Working Loads (SWL)
- British Standard hand signals
- Rated capacity indicators
- Pre-operational checks / shutdown procedure
- Introduction to wire ropes.

Practical training covering the operating techniques required to:

- Contribute to integrated safe systems of work
- Carry out pre-start checks and inspections
- Control the lift with basic functions to transfer and position loads safely
- Respond to hand signals and radio instruction

THE VALUE OF CRANE SIMULATORS

During training

Offshore hydraulic pedestal crane simulators have many advantages to support development of safe crane operating skills that work in unison with, rather than replace, training on an actual crane.

A qualified instructor can design a training scenario by selecting work location type, vessel type and loads to closely replicate the trainee's work location.

These realistic working environments provide a significant challenge to the trainee crane operator as the instructor increases the degree of difficulty to build operator capability.

During assessment

Simulators have the greatest impact for testing a crane operator's reaction to a set of emergency situations. Situations such as boom failures or load collapse could never be replicated at the workplace without catastrophic damage.

30,000+

delegates have achieved Sparrows certification over the last five years

Sparrows Offshore Crane Operator

Global Training and Competence Standard

Step 1 NOVICE TRAINING	Step 2 DECK OPS EXPERIENCE	Step 3 INTERMEDIATE TRAINING
Formal training – stage 1 Delivered at Altrad Sparrows training centres or client location (facilities dependent). Access to crane and classroom required Duration 40 hours / 5 days	Exposure to deck lifts under direct supervision of Altrad Sparrows crane coach or Instructor Recommended duration 30 hours recorded operating hours per person	Formal training – stage 2 Delivered at Altrad Sparrows Training Centres or client location (facilities dependent). Access to crane and classroom required Duration 40 hours / 5 days
Outcome – ability to conduct deck lifts under direct supervision	Outcome – ability to progress to intermediate training	Outcome – capable of carrying out deck lifts unsupervised
Step 4 SUPPLY VESSEL EXPOSURE	Step 5 COMPETENCE ASSESSMENT	Step 6 CONTINUOUS COMPETENCE
Exposure to supply vessel lifts under the direct supervision of Altrad Sparrows crane coach or Instructor Recommended duration 90 hours recorded operating hours per person (deck and supply vessel)	First workplace assessment – stage 3 Assessment of candidate's ability to conduct safe lifting operations observed by Altrad Sparrows assessor Duration 6 hours	Competence re-assessment – stage 3 Re-assessment of candidate's ability to conduct safe lifting operations observed by Altrad Sparrows assessor at workplace or on crane simulator Duration 8 hours
Outcome – capable of progressing to initial competence assessment	Outcome – capable of carrying out all lifting operations unsupervised	Outcome – capable of demonstrating continuous competence to carry out all lifts unsupervised

Altrad Sparrows offers a stepped progression programme that blends formal training with workplace development and assessment. Experienced crane operators can enter the programme at an advanced level subject to evidence of capability.

All certification is valid for two years.

Each crane operator develops at a different pace, dependent on ability to absorb information and dexterity. As a result, workplace experience hours are recommended rather than actual. Scheduling a competence assessment is based on the crane coach's / instructor's recommendation.

If the individual's first language is not English then additional time will be required to work with an interpreter.
